CAPABILITIES

PROTOTYPING

Our engineering teams rely on advanced electrical design and simulation tools to develop accurate and reliable wiring solutions. Through a fast and flexible prototyping process, we validate connectivity, fit and functionality, ensuring seamless integration into our clients' production lines.

L:735px A:470px

QUALITY CONTROL

To ensure maximum reliability, every wiring harness undergoes rigorous inspection and project-specific testing. Our quality laboratories validate new designs by assessing electrical performance, durability and material compliance, ensuring results that meet and often surpass industry standards.

MAINTENANCE

Our maintenance teams ensure the reliability of all production equipment through preventive routines and continuous monitoring. By combining technical expertise with real-time diagnostics, we minimize downtime, optimize performance and maintain stable conditions for high-quality wiring harness manufacturing.

PRODUCTION

Our production lines operate with advanced equipment and integrated traceability systems that ensure consistency and reliability in every wiring harness we manufacture. This technological environment supports continuous improvement, enabling adjustments in real time and driving efficiency through lean-based processes.

CERTIFICATIONS

Lorem ipsum dolor sit amet, consectetur adipiscing elit.

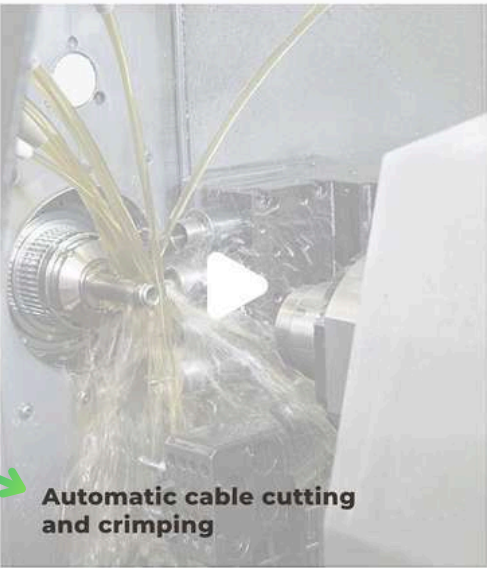

São 6 certificados que ainda não entendi quais são para ver os logos.

MANUFACTURING TECHNOLOGIES

Tamanho dos vídeos:
L:520px A:600px

More manufacturing technologies

- Terminal ultrasonic welding
- Isolation displacement
- Wire twisting
- PCB welding
- Assembly lines
- Electrical checking

- Sealing verification
- Subsets already assembled of electrical wiring with plastic parts
- Assembly lines
- Automatic coaxial cable cutting and stripping
- Automatic unitary seals positioning

- Ultrasonic conforming of cable ends
- Thermo-shrinkable sealing sleeve installation
- Cable ends tinning
- Components with highly innovative plastic compounds
